

Condensate Management for Varistar LHX+ 45 / RackChiller In-Row 45,

Data Solutions

???

24630-178

For facilities which operate at low chilled water temperatures, there is an increased risk of condensation. The condensate water will drip into the condensate tray where it will be collected. This kit enables the device to remove the condensate water into a condensate management plumbing network.

The kit is meant for installations with a condensate water plumbing overhead of the cooler. It transports the water with the help of a pump above the level of the condensate tray.
